An investment in Knowledge pays the best interest….

Creating Threads (Part 1)

in Java

=> By using "Thread" class :-

-> Steps to create thread using "Thread" class :-

1. inherits the "Thread" class
2. override the run() method
3. create an instance of the class
4. start the thread

==========
==========

=> What is the use of start() method :-

1. It register the thread with "thread scheduler"
2. It will execute all the mentadory functionalities related to thread
3. It will invoke the run() method

etc

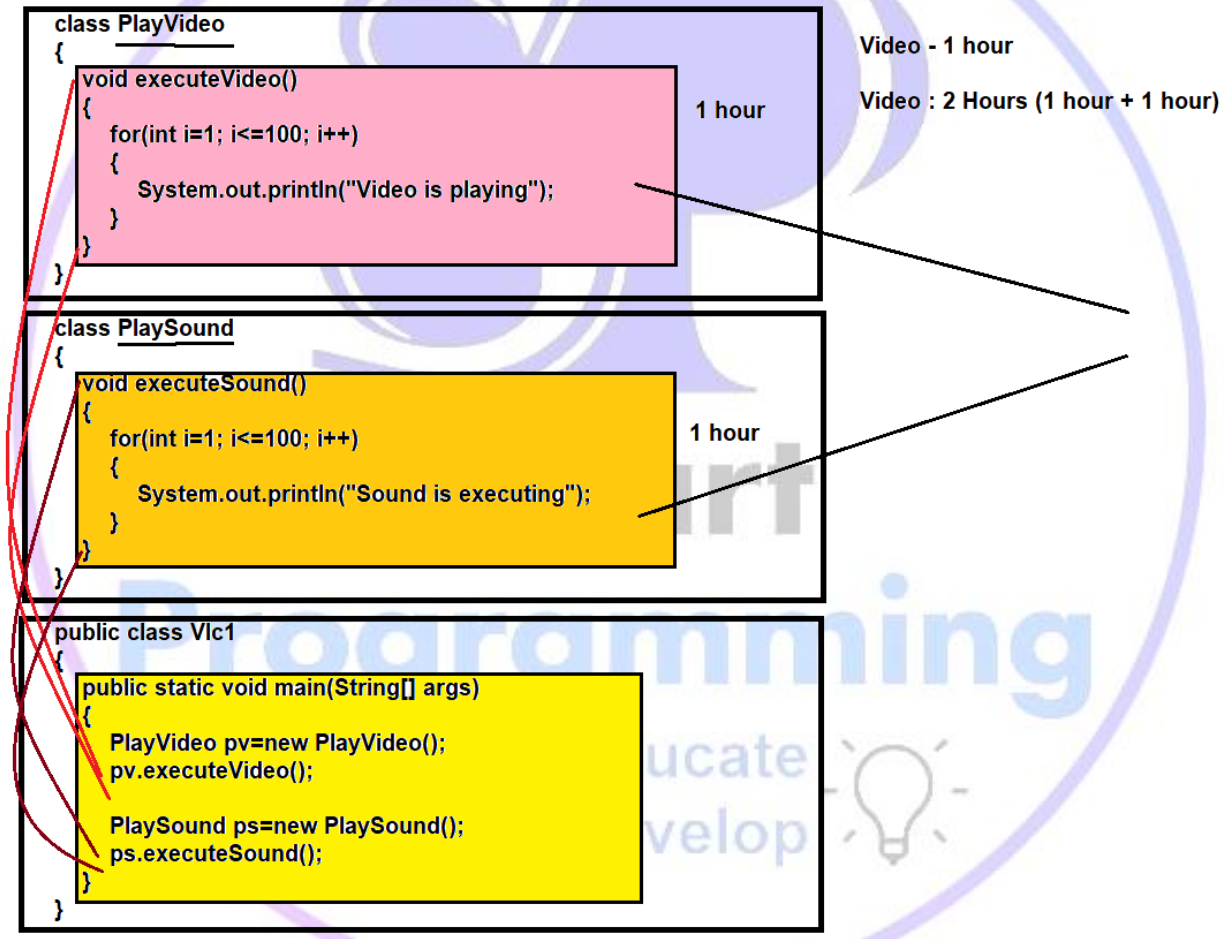
Diagrams used in the videos :-

➔ Diagram 1 :
(flow of simple thread)

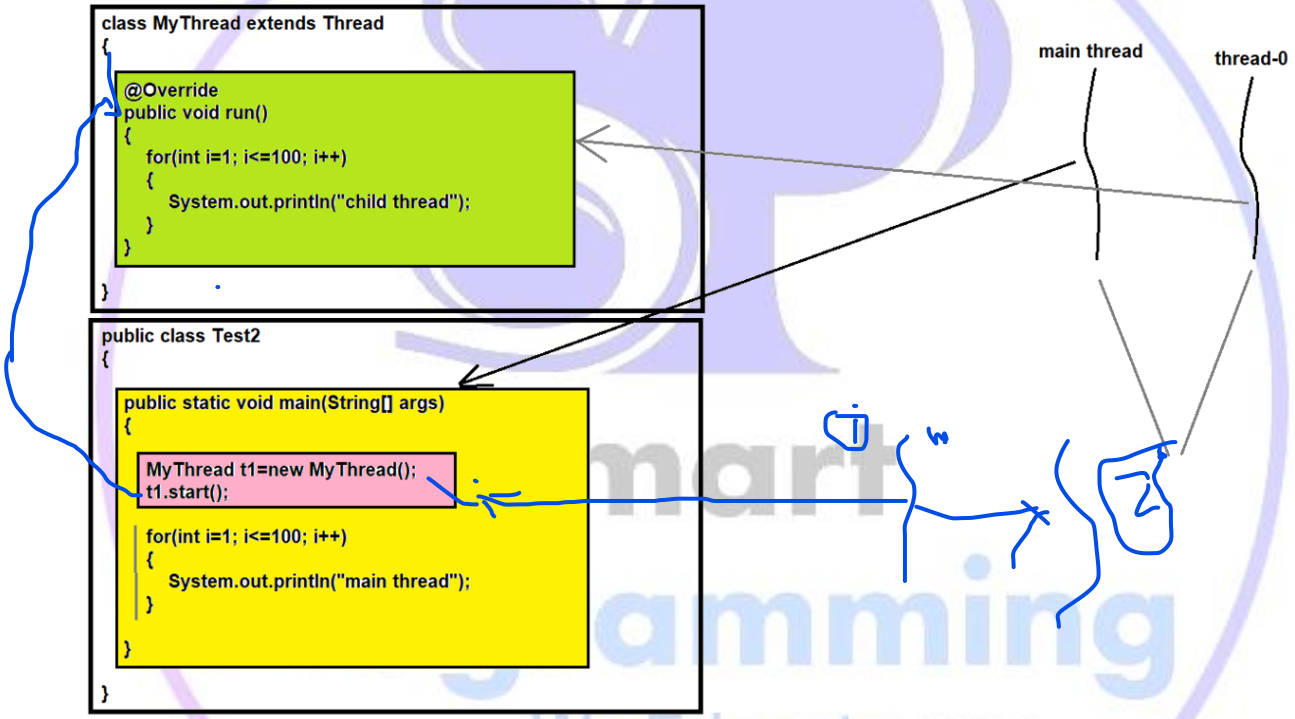
```
class MyThread extends Thread
{
    @Override
    public void run()
    {
        //thread task
    }
}
public class Test2
{
    public static void main(String[] args)
    {
        MyThread t1=new MyThread();
        t1.start();
    }
}
```

➔ Diagram 2 :

(If we don't use thread concept then time taken to perform task will increase)



➔ Diagram 3 :
(Main thread and user thread creation and their execution)



We Educate
We Develop

➔ Diagram 4 :
(Which thread will execute which part)

```
/**
 *
 * @author Deepak
 */
public class Test extends Thread
{
    @Override
    public void run()
    {
        System.out.println("hi");
    }
    public static void main(String[] args)
    {
        Test t=new Test();
        t.start();
    }
}
```
