An investment in Knowledge pays the best interest….

JDBC (PART 15)

BLOB & CLOB

BLOB : (Binary Large Object)

- It is variable length binary large object that can hold upto 2gb long data
- It is used to store images, voice, video or any non-traditional data.

CLOB : (Character Large Object)

- It is variable length character large object that can hold upto 2gb long data
- It is used to store txt file, pdf file, xml file etc.

LOB (Large Object) - BLOB & CLOB together are known as LOB

Difference between BLOB & CLOB

- Full form Binary Large Object
  Full form Character Large Object

- BLOB stores the data in the form of binary stream
  CLOB stores the data in the form of character stream

- BLOB is used to store large binary data
  CLOB is used to store large textual data

- BLOB is used to store images, videos, voices etc
  CLOB is used to store txt, xml, pdf etc files

- MySQL supports TINYBLOB, BLOB, MIDIUMBLOB & LARGEBLOB
  MySQL supports TINYTEXT, TEXT, MEDIUMTEXT & LONGTEXT

- For BLOB java created an interface i.e. java.sql.Blob
  For CLOB java created an interface i.e. java.sql.Clob;

- Method used for BLOB are setBlob() or setBinaryStream() // getBlob() or getBinaryStream()
  Method used for CLOB are setClob() or setCharacterStream() // getClob() or getCharacterStream()

Restrictions for LOB (BLOB or CLOB or TEXT)

1. We cannot compare these files (=)

2. We cannot make LOB as primary key

3. Clauses (DISTINCT, GROUP BY, ORDER BY) cannot be used for LOB
