An investment in Knowledge pays the best interest….

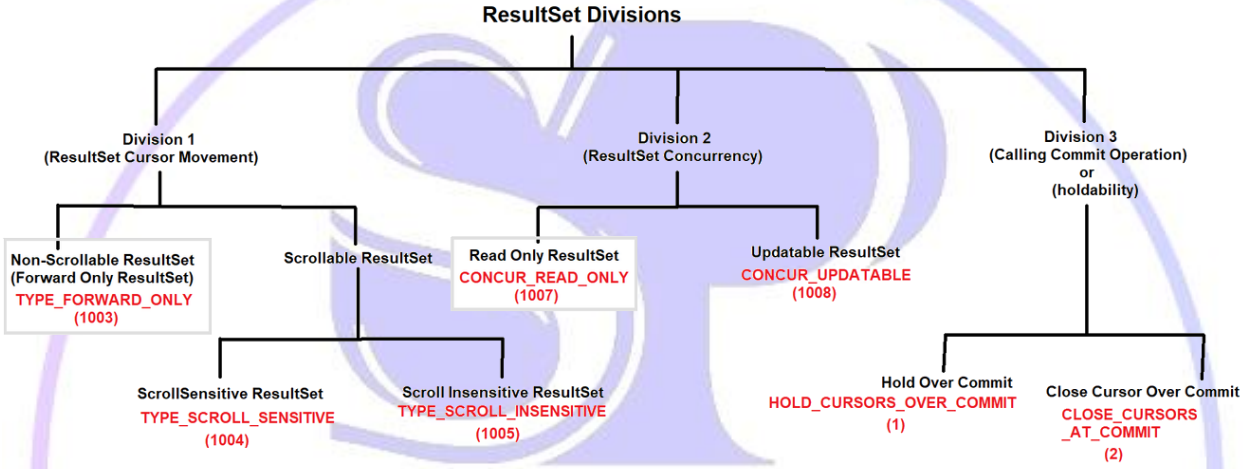
JDBC (PART 9)

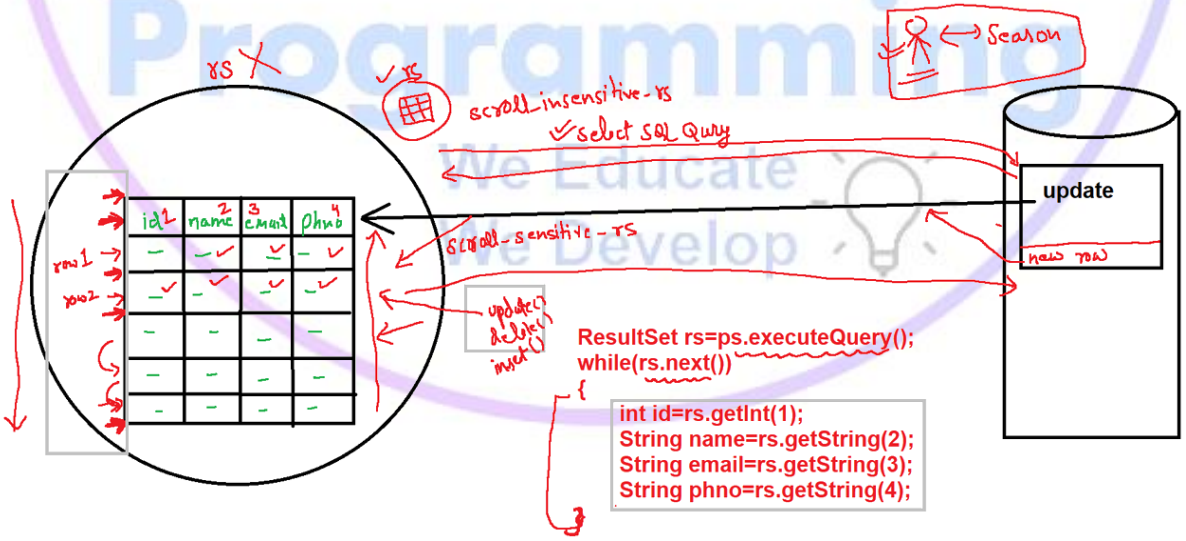
⇨ The SELECT SQL query is used to retrieve data from database in the form of ResultSet

⇨ Jdbc provides the following connection methods to create statement with desired ResultSet:

- createStatement(int RSType, int RSConcurrency)
- prepareStatement(String sql, int RSType, int RSConcurrency)
- prepareCall(String sql, int RSType, int RSConcurrency)

⇨ Types Of ResultSet





⇨ Methods of ResultSet:

1. Navigational Methods

- ➔ beforeFirst()
- ➔ afterLast()
- ➔ first()
- ➔ last()
- ➔ absolute(int)
- ➔ relative(int)
- ➔ previous()
- ➔ next()
- ➔ getRow()
- ➔ moveToInsertRow()
- ➔ moveToCurrentRow()

2. Get Methods

- ➔ getXxx(String column_name)
- ➔ getXxx(int column_index_position)

3. Update Methods

- ➔ updateXxx(String colm_name, Xxx s)
- ➔ updateXxx(int column_index_position, Xxx s)

- ➔ updateRow()
- ➔ deleteRow()
- ➔ refreshRow()
- ➔ insertRow()
- ➔ cancelRowUpdates()
